DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement filed 12/12/2003 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered.

Drawings

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the plurality of printhead modules, the inkjet printer, and the fiducials must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for

Art Unit: 2861

of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

3. Claim 3 is objected to because of the following informalities: the word "with" should be replaced by "within". Appropriate correction is required.

Double Patenting

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double

Art Unit: 2861

patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

- 5. Claims 1-5 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-5 of U.S. Patent No. 6,802,594.
- 6. Below is a table of comparison between the conflicting claims that show why they are not patentably distinct from each other:

10/728,797

- 1. A printhead assembly for an inkjet printer, the printhead assembly comprising:
- a plurality of printhead modules;
- a support member

with a first component and a second component, the first component adapted for mounting the printhead assembly within an inkjet printer, and the second component adapted to mount the printhead modules, the second component having a modules than the first component; wherein,

the first component is bonded to the second component via intermediate resilient material; such that,

the first component can expand more

6,802,594 B2

A system for aligning a plurality of printhead modules mounted on a support member in a printer [column 4, lines 8-9]

wherein the beam has a core of silicon and an outer metal shell [column 4, lines 22-25]. [The outer metal shell is taken as the first component and the silicon core is taken as the second component. It is an inherent property of the silicon core to have a coefficient of thermal expansion closer to that of the printhead chip than the metal shell.]

wherein the beam has an elastomeric layer between the silicon core and metal shell to permit the limited relative movement [column 4, lines 30-34].

[it is an inherent property of the metal to

Art Unit: 2861

than the second component.

2. A printhead assembly according to claim 1 wherein the support member is a beam and the printhead modules include MEMS manufactured chips having at least one fiducial on each; wherein,

the fiducials are used to misalign the printhead modules by a distance calculated from:

- i) the difference between the coefficient of thermal expansion of the beam and the printhead chips;
- ii) the spacing of the printhead chips along the beam; and,
- iii) the difference between the production temperature and the operating temperature.
- 3. A printhead assembly according to claim 2 wherein the first component of the beam is an outer metal shell, and the second component of the beam is a core of silicon with the outer metal shell.
- 4. A printhead assembly according to claim 3 wherein the elastomeric material is an elastomeric layer interposed between the silicon core and metal shell.
- 5. A printhead assembly according to claim 3 wherein the outer shell is formed from laminated layers of at least two different metals.

expand more than the dielectric]

wherein the support member is a beam and the printhead modules include MEMS manufactured chips having at least one fiducial on each [column 4, lines 9-13]; wherein,

the fiducials are used to misalign the printhead modules by a distance calculated from:

- i) the difference between the coefficient of thermal expansion of the beam and the printhead chips;
- ii) the spacing of the printhead chips along the beam; and,
- iii) the difference between the production temperature and the operating temperature [column 4, lines 15-21].

A system for aligning a plurality of printhead modules mounted to a support member and a printer according to claim 1 wherein the beam has a core of silicon and an outer metal shell [column 4, lines 22-25].

A system for aligning a plurality of printhead modules mounted to a support member in a printer according to claim 3 wherein the beam has an elastomeric layer between the silicon core and metal shell to permit the limited relative movement [column 4, lines 30-34].

A system for aligning a plurality of printhead modules mounted to a support member in a printer according to claim 4 wherein the outer shell is formed from laminated layers of at least two different metals [column 4, lines 35-38].

Art Unit: 2861

7. Claims 6 is rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-5 of U.S. Patent No. 6,802,594 in view of Silverbrook (US Patent 6,652,071). Patent 6,802,594 meets the claimed limitations except "wherein the printhead is a pagewidth printhead for printing across the width of a page simultaneously."

Page 6

- 8. Patent 6,652,071 discloses a printhead assembly for an inkjet printer very similar in its properties and function as the one in Patent 6,802,594 "wherein the printer is a pagewidth printer." It would have been obvious to one of ordinary skill in the art at the time of applicant's invention to use a pagewidth printhead on the printer of the claimed invention in 6,802,594. One would have been motivated to so modify 6,802,594 to print across the width of the page thereby increasing printing speeds as taught in 6,652,071.
- 9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jannelle M. Lebron whose telephone number is (571) 272-2729. The examiner can normally be reached on Monday thru Friday 8:30am-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David M. Gray can be reached on (571) 272-2119. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
